

SEC-PROC-PATCH-001 V1 - Plant Patch and Vulnerability Handling (SUPERSEDED)

Synthetic training document. Not for operational use.

Document ID: SEC-PROC-PATCH-001 | Version 1.0 | Status: SUPERSEDED | Effective: 2024-03-01
| Owner: Plant Cyber Security

1. Purpose

Describes how vulnerabilities on plant assets and their monitoring gateways were handled before the 2025 revision.

2. Remediation targets (historical)

All severities were remediated "at the next planned outage". No fixed day counts were defined.

3. Notes

This version is retained for history only. It was replaced by Version 2.0 because open-ended targets allowed High-severity issues to stay open for more than a year. Do not use for current decisions.
