

SEC-PROC-PATCH-001 V3D - Plant Patch and Vulnerability Management Standard (DRAFT)

Synthetic training document. Not for operational use. DRAFT: not approved.

Document ID: SEC-PROC-PATCH-001 | Version 3.0-DRAFT | Status: DRAFT | Proposed effective: not set | Owner: Plant Cyber Security

1. Proposal under review

A shorter schedule is proposed for discussion only:

Severity	Proposed target
Critical	72 hours
High	7 days
Medium	21 days
Low	60 days

2. Status

Not approved. Comments from engineering and operations are still open, because patching inside 72 hours conflicts with maintenance-window rules for pumps and transformers. Until approval, Version 2.0 remains the governing standard.
